SUGGESTED CITATION

U.S. Bureau of the Census. *U.S. Census of Population: 1960. Subject Reports. Occupation by Industry.* Final Report PC(2)-7C. U.S. Government Printing Office, Washington, D.C., 1963.

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington 25, D.C. or any of the Field Offices of the Department of Commerce – Price $1.25.

PREFACE

This report presents statistics from the 1960 Census of Population on the cross-classification of occupation by industry for employed persons. These data show the occupational structure of each industry and, conversely, the industrial distribution of the workers in each occupation. Legal provision for this census, which was conducted as of April 1, 1960, was made in the Act of Congress of August 31, 1954 (amended August 1957), which codified Title 13 U.S. Code.

The major portion of the information compiled from the 1960 Census of Population appears in Volume I, Characteristics of the Population, which contains data for the United States, States and counties and their urban and rural parts, cities, minor civil divisions, etc. The present report is part of Volume II, Subject Reports, and is designated as PC(2)-7C. A summary description of all the final reports of the 1960 Population Census appears on page IV.

ACKNOWLEDGMENTS

A large number of persons participated in the various activities of the 1960 Census of Population. Primary responsibilities were exercised by many of the persons listed on the preceding page. Within the Population, Demographic Operations, Field, Geography, and Statistical Methods Divisions, most of the staff members worked on the program. Important contributions were also made by the staffs of the Administrative Service Division, Everett H. Burke, Chief; Budget and Management Division, Charles H. Alexander, Chief; Data Processing Systems Division, Robert F. Drury, Chief; Jeffersonville Census Operations Office, Robert D. Krook, Chief; Personnel Division, James P. Taff, Chief; and Statistical Research Division, William N. Hurwitz, Chief.

Stanley Greene, Chief, Miles A. Abelson and Thomas C. Walsh of the Economic Statistics Branch, Population Division, had the major responsibility for planning this report and developing its content. John C. Beresford provided liaison with the operations staff, Elizabeth A. Larmon assisted in the preparation of the introductory text, and Mildred M. Russell and Leah S. Anderson performed the technical editorial work. The procedures for compiling the data were devised by Patience Lauriat, Catherine M. Neafsey, George E. Turner, and Alfonso F. Episcopo of the Demographic Operations Division. The sampling materials were prepared by Robert Hanson, Stanley M. Edelstein, and Anthony G. Turner of the Statistical Methods Division.

The census program was designed in consultation with a number of advisory committees and many individuals in order to maximize the usefulness of the data. Among the groups organized for this purpose were the Technical Advisory Committee for the 1960 Population Census, the Council of Population and Housing Census Users, and the Federal Agency Population and Housing Census Council (sponsored by the U.S. Bureau of the Budget). The persons who served with these groups represented a wide range of interest in the census program; their affiliations included universities, private industry, research organizations, labor groups, Federal agencies, State and local governments, and professional associations.

May 1963.

FINAL REPORTS OF THE 1960 CENSUS OF POPULATION

The final reports of the 1960 Population Census are arranged in four volumes and a joint Population-Housing series of census tract reports. For Volumes II, III, and IV, which remain to be published as of this date, the scheduled content is subject to change. The 1960 Population Census publication program also includes preliminary, advance, and supplementary reports, certain evaluation, procedural, and administrative reports, and graphic summaries. After publication, copies of all reports are available for examination or purchase at any U.S. Department of Commerce Field Office. For reports not yet issued, more detailed descriptions of content than those given below can be obtained from the Chief, Population Division, Bureau of the Census, Washington 25, D.C.

Certain types of unpublished statistics are available for the cost of preparing a copy of the data. Also, under certain conditions, special tabulations of the 1960 Census data can be prepared on a reimbursable basis. In addition, there are available for purchase magnetic tapes and punchcards containing 1960 Census information on the characteristics of a one-in-a-thousand and a one-in-ten-thousand sample of the population of the United States. Confidentiality of the information, as required by law, has been maintained by the omission of certain identification items. Further information about any of these materials can be obtained by writing to the Chief, Population Division, Bureau of the Census.

Volume I. Characteristics of the Population. This volume consists of separate reports for the United States, each of the 50 States, the District of Columbia, Puerto Rico, Guam, Virgin Islands, American Samoa, and Canal Zone. For each of these 57 areas, the data were first issued in four separate paper-bound "chapters," designated as PC(1)-A, B, C, and D. The four chapters for each area are now being assembled for issuance in a buckram-bound "part." The 57 chapters "A" have been assembled and issued in a buckram-bound edition, designated as Part A. (For Guam, Virgin Islands, American Samoa, and Canal Zone, the material normally contained chapters B, C, and D are included in chapter B.)

Series PC(1)-1A to 57A: Chapter A. Number of Inhabitants. These reports contain final population counts for States and counties and their urban and rural parts, and for standard metropolitan statistical areas, urbanized areas, all incorporated places, unincorporated places of 1,000 inhabitants or more, and minor civil divisions.

Series PC(1)-1B to 57B: Chapter B. General Population Characteristics. These reports present statistics on sex, age, marital status, color or race, and relationship to head of household for States and counties and their urban and rural parts, and for standard metropolitan statistical areas, urbanized areas, places of 1,000 inhabitants or more, and minor civil divisions.

Series PC(1)-1C to 53C: Chapter C. General Social and Economic Characteristics. These reports cover the subjects of nativity and parentage, State of birth, country of origin of the foreign stock, mother tongue, place of residence in 1955, year moved into present house, school enrollment by level and type, years of school completed, families and their composition, fertility, veteran status, employment status, weeks worked in 1959, year last worked, occupation group, industry group, class of worker, place of work, means of transportation to work, and income of persons and families. Each subject is shown for some or all of the following areas: States and counties and their urban, rural-nonfarm, and rural-farm parts, standard metropolitan statistical areas, urbanized areas, and urban places.

Series PC(1)-1D to 53D: Chapter D. Detailed Characteristics. These reports present most of the subjects covered in chapter C, above, cross-classified by age, color, and other characteristics. There is also included additional information on families, as well as data on single years of age, detailed occupation, and detailed industry. Each subject is shown for some or all of the following areas: States and their urban, rural-nonfarm, and rural-farm parts; and large counties, cities, and standard metropolitan statistical areas.

Volume I, Parts 1 to 57: Characteristics of the Population. This will consist of 57 parts--one for the United States, each of the 50 States, District of Columbia, Puerto Rico, Guam, Virgin Islands, American Samoa, and Canal Zone. Each part will consist of the data previously published in the four chapters A, B, C, and D, and will be in the form of a separate, buckram-bound book. Parts 54, 55, 56, and 57--for Guam, Virgin Islands, American Samoa, and Canal Zone, respectively--will be bound in a single book.

Volume I, Part A: Number of Inhabitants. This is a compendium of the 57 chapter A reports, i.e., PC(1)-1A to 57A.

Volume II (Series PC(2) reports). Subject Reports. Each report in this volume will concentrate on a particular subject. Detailed information and cross-relationships will generally be provided on a national and regional level; in a few reports data for States or standard metropolitan statistical areas will also be shown. Among the characteristics to be covered are national origin and race, fertility, families, marital status, migration, education, employment, unemployment, occupation, industry, and income. There will also be a report on the geographic distribution and characteristics of the institutional population.

Volume III (Series PC(3) reports). Selected Area Reports. This volume will contain three reports presenting, respectively, selected characteristics of the population (1) for State economic areas, and (2) according to the size of place where the individual resided, and (3) social and economic characteristics of Americans overseas.

Volume IV. Summary and Analytical Report. This report will present an analytical review of the results of the 1960 Census of Population for each major field.

Series PHC(1). Census Tract Reports. These reports present information on both population and housing subjects. There is one report for each of 180 tracted areas in the United States and Puerto Rico. The population subjects include age, race, marital status, country of origin of the foreign stock, relationship to head of household, school enrollment, years of school completed, place of residence in 1955, employment status, occupation group, industry group, place of work, means of transportation to work, and income of families, as well as certain characteristics of the nonwhite population in selected tracts. The housing subjects include tenure, color of head of household, vacancy status, condition and plumbing facilities, number of rooms, number of bathrooms, number of housing units in structure, year structure built, basement, heating equipment, number of persons in unit, persons per room, year household head moved into unit, automobiles available, value of property, and gross and contract rent, as well as certain characteristics of housing units with nonwhite household head for selected tracts. In addition, for selected tracts these reports contain data on certain population and housing subjects for persons of Puerto Rican birth or parentage and for white persons with Spanish surname. (This series is the same as the tract reports included in the publication program for the 1960 Census of Housing.)

Occupation by Industry

GENERAL

This report presents detailed national statistics cross-classifying occupation by industry for employed men and women. The statistics are based on a 5-percent sample of the population enumerated in the Eighteenth Decennial Census of Population, taken as of April 1, 1960.

RELATED MATERIALS

Volume I, State Reports and U.S. Summary.--The present report supplements the reports for individual States and for the United States and its several regions and divisions, originally published in the Series PC(1)-C reports, "General Social and Economic Characteristics," and the Series PC(1)-D reports, "Detailed Characteristics." These reports form two of the four components of the 1960 Census of Population, Volume I, Characteristics of the Population. Part 1 of Volume I presents data originally published in the four separate United States Summary reports; the remainder of the volume is divided into a part for each State, containing the data originally published in the State reports.

In Volume I, the cross-classification of occupation by industry is shown in terms of intermediate occupation and intermediate industry groups for the country as a whole, for each State, and for standard metropolitan statistical areas of 250,000 or more. In this report, the cross-classification is shown in terms of detailed categories for both subjects but is confined to the country as a whole.

Volume II, Subject Reports.--Several of the other Volume II reports will contain data on occupation and industry. The report entitled Occupational Characteristics will cover such subjects as sex, age, race, urban-rural residence, size of family, marital status, mobility, years of school completed, hours worked, class of worker, weeks worked in 1959, and income received in 1959, for persons in each of approximately 500 detailed occupational categories. A similar report on industrial characteristics may also be published.

Other proposed Volume II reports call for presentation of occupation and industry data in relation to the subject of the report. The subjects of these reports will cover nativity and parentage, educational attainment, unemployment, the labor reserve, nonwhite population by race, Puerto Ricans, and persons of Spanish surname.

Volume III, Part 1A, State Economic Areas, includes data on major occupation and industry groups for State economic areas by urban and rural residence.

1950 Census reports.--Data for 1950 on occupation by industry similar to those shown here were presented in the report 1950 Census of Population, Volume IV, Special Reports, Part 1, Chapter C, Occupation by Industry. (For a discussion of 1950-1960 comparisons, see section on "Comparability.")

Current Population Survey.--Data for selected occupation and industry groups are also collected by the Bureau of the Census in the Current Population Survey (CPS) and published monthly by the Bureau of Labor Statistics in Employment and Earnings. In April 1960, the data for this survey were collected from a sample of approximately 35,000 households in 333 areas throughout the country. In addition, CPS data on major occupation group (and, occasionally, on major industry group) in cross-classification with such characteristics as marital status, mobility, and income are published by the Census Bureau annually in Series P-20 and P-60, Current Population Reports. The intercensal statistics provided by the Current Population Survey are, in general, designed to be comparable with the decennial census statistics. There are, however, certain elements of difference, as explained in the section on "Comparability."

AVAILABILITY OF UNPUBLISHED DATA

Data cross-classifying occupation by industry as shown in this report are available for regions of the United States on a reimbursable basis. Requests for unpublished data, giving a specific description of the figures desired, may be made by writing to the Chief, Population Division, Bureau of the Census, Washington 25, D.C. Inquiries concerning unpublished data should be transmitted to the Bureau as soon as possible because tape files are not maintained indefinitely.

DEFINITIONS AND EXPLANATIONS

The definitions of the pertinent concepts used in this report are given below. Some of the definitions used in 1960 differ from those used in 1950. These changes were made after consultation with users of census data in order to improve the statistics even though it was recognized that comparability would be affected.

The definitions and explanations should be interpreted in the context of the 1960 Censuses, in which data were collected by a combination of self-enumeration, direct interview, and observation by the enumerator.

The definitions below are consistent with the instructions given to the enumerator. As in all surveys,

there were some failures to execute the instructions exactly. Through the forms distributed to the households, the respondents were given explanations of some of the questions more uniformly than would have been given in direct interviews. Nevertheless, it was not feasible to give the full instructions to the respondents, and some erroneous replies have undoubtedly gone undetected.

Discussions of the definitions of the population items are given in 1960 Census of Population, Volume I, Characteristics of the Population, Part 1, United States Summary, and in each of the State parts of the same volume.

AGE

The age classification is based on the age of the person in completed years as of April 1, 1960, as determined from the reply to a question on month and year of birth.

EMPLOYMENT STATUS

Reference week.--The data on employment status relate to the calendar week prior to the date on which the respondents filled their Household Questionnaires or were interviewed by enumerators. This week is not the same for all respondents because not all persons were enumerated during the same week. The majority of the population was enumerated during the first half of April.

Employed.--Employed persons comprise all civilians 14 years old and over who were either (a) "at work"--those who did any work for pay or profit, or worked without pay for 15 hours or more on a family farm or in a family business or (b) were "with a job but not at work"--those who did not work and were not looking for work but had a job or business from which they were temporarily absent because of bad weather, industrial dispute, vacation, illness, or other personal reasons.

OCCUPATION, INDUSTRY, AND CLASS OF WORKER

The data on occupation, industry, and class of worker were derived from answers to the questions on the Household Questionnaire shown in the next column.

In the 1960 Census of Population, information on occupation, industry, and class of worker collected for employed persons, related to the job held during the reference week. All three items related to one specific job held by the person. For a person employed at two or more jobs, the job at which he worked the greatest number of hours during the reference week was reported. (See section below on "Collection and processing of data.")

The classification systems used for the occupation and industry data in the 1960 Census of Population are described below. These systems were developed in consultation with many individuals, private organizations, and government agencies, and in particular the Interagency Occupational Classification Committee of the U.S. Bureau of the Budget.

P27. Occupation *(Answer 1, 2, or 3)*

1. This person **last** worked in 1949 or earlier ... ☐
   This person has never worked ... ☐

OR

2. On active duty in the Armed Forces now ... ☐

OR

3. Worked in 1950 or later ... ☐ *Answer a to e, below.*

Describe this person's job or business last week, if any, and write in name of employer. If this person had no job or business last week, give information for last job or business since 1950.

a. For whom did he work?

.....
(Name of company, business, organization, or other employer)

b. What kind of business or industry was this?
Describe activity at location where employed.

.....
(For example: County junior high school, auto assembly plant, TV and radio service, retail supermarket, road construction, farm)

c. Is this primarily: *(Check one box)*

- Manufacturing ... ☐
- Wholesale trade ... ☐
- Retail trade ... ☐
- Other (services, agriculture, government, construction, etc.) ... ☐

d. What kind of work was he doing?

.....
(For example: 8th grade English teacher, paint sprayer, repairs TV sets, grocery checker, civil engineer, farmer, farm hand)

e. Was this person: *(Check one box)*

- Employee of **private** company, business, or individual, for wages, salary, or commissions ... ☐
- **Government** employee (Federal, State, county, or local) ... ☐
- Self-employed in **own** business, professional practice, or farm ... ☐
- Working **without pay** in a family business or farm ... ☐

Occupation

Classification system.--The occupational classification system developed for the 1960 Census of Population is organized into 12 major groups. It consists of 494 items, 297 of which are specific occupation categories and the remainder are subgroupings (mainly on the basis of industry) of 13 of the occupation categories. For table 2 of this report, the industry subgroupings were eliminated because the table presents a distribution by industry for each occupation. Certain combinations were also made, and the detailed list used in table 2 consists of 279 items. The composition of the 297 specific categories is shown in the publication, U.S. Bureau of the Census, 1960 Census of Population, Classified Index of Occupations and Industries, U.S. Government Printing Office, Washington, D.C., 1960.

In the separation of "managers, officials, and proprietors (n.e.c.)" by class of worker into salaried and self-employed components, the small number of unpaid family workers in this occupation is included in

he self-employed component. Mine laborers, noted as n exclusion from the major group "laborers, except arm and mine," are included in the major group "operatives and kindred workers."

The abbreviation "n.e.c." used in the tables on ccupation means "not elsewhere classified."

Relationship to DOT Classification.--The Population Census occupational classification is generally omparable with the system used in the Dictionary of ccupational Titles (DOT).[1] The two systems, however, re designed to meet different needs and to be used nder different circumstances. The DOT system is deigned primarily for employment service needs, such as lacement and counseling, and is ordinarily used to lassify very detailed occupational information obained in an interview with the worker himself. The ensus system, on the other hand, is designed for staistical purposes and is ordinarily used in the classication of limited occupational descriptions obtained n a self-enumeration questionnaire or in an interview ith a member of the worker's family. As a result, he DOT system is much more detailed than the census ystem; and it also calls for many types of distincions which cannot be made from census information.

Industry

Classification system.--The industrial classifiation system developed for the 1960 Census is organzed into 13 major industry groups and consists of 151 ategories (two of which are the government and private ubgroupings of the category "educational services"). n table 2 of this report 12 categories were divided nto two class-of-worker categories and two combinaions were made, resulting in a detailed industry list f 161 categories. The composition of each specific ategory is shown in the above-mentioned Classified ndex of Occupations and Industries.

Relation to Standard Industrial Classification.--he list presented below, shows for each category from he Census of Population, the code designation of the imilar category or categories in the Standard Industrial Classification (SIC). This relationship is preented here for general information purposes only and s not intended to imply complete comparability. The IC, which was developed under the sponsorship of the .S. Bureau of the Budget, is designed for the compiation of industry information based on establishment eports. These reports, by their nature and degree of etail, produce considerably different data on industry rom those obtained from household enumerations such s the Census of Population. As a result, some of the istinctions called for in the SIC cannot be made in he 1960 Census. Furthermore, the data from the Census f Population are designed to meet different needs from hose met by the establishment data. The allocation f government workers represents perhaps the most asic difference between the two systems. The SIC lassifies all government agencies in a single major roup. In the Population Census system, however, the ategory "public administration" includes only those ctivities which are uniquely governmental functions, such as legislative and judicial activities and most of the activities in the executive agencies. Government agencies engaged in educational and medical services and in activities commonly carried on also by private enterprises, such as transportation and manufacturing, are classified in the appropriate industrial category. For example, persons employed by a hospital are classified in the "hospitals" group, regardless of whether they are paid from private or public funds.

Relation to certain occupation groups.--In the Population Census classification systems, the industry category "agriculture" is somewhat more inclusive than the total of the two major occupation groups, "farmers and farm managers" and "farm laborers and foremen." The industry category also includes (a) persons employed on farms in occupations such as truck driver, mechanic, and bookkeeper, and (b) persons engaged in agricultural activities other than strictly farm operation, such as crop dusting or spraying, cotton ginning, and landscape gardening. Similarly, the industry category "private households" is somewhat more inclusive than the major occupation group "private household workers." In addition to the baby sitters, housekeepers, laundresses, and miscellaneous types of domestic workers covered by the major occupation group, the industry category includes persons in occupations such as chauffeur, gardener, and secretary, if they work for private families.

Class of Worker

The distribution of the employed by class of worker is not shown separately in this report. However, certain of the occupations and industries shown are further classified by class of worker.

The class-of-worker information refers to the same job as the occupation and industry information. The assignment of a person to a particular class-of-worker category is basically independent, however, of the occupation or industry in which he worked. The classification by class of worker consists of four categories which are defined as follows:

1. Private wage and salary workers.--Persons who worked for a private employer for wages, salary, commission, tips, pay-in-kind, or at piece rates.

2. Government workers.--Persons who worked for any governmental unit (Federal, State, local, or international), regardless of the activity which the particular agency carried on.

3. Self-employed workers.--Persons who worked for profit or fees in their own business, profession, or trade, or who operated a farm either as an owner or tenant. Included here are the owner-operators of large stores and manufacturing establishments as well as small merchants, independent craftsmen and professional men, farmers, peddlers, and other persons who conducted enterprises of their own. Persons paid to manage businesses owned by other persons or by corporations, on the other hand, are classified as private wage and salary workers (or, in some few cases, as government workers).

4. Unpaid family workers.--Persons who worked without pay on a farm or in a business operated by a person to whom they are related by blood or marriage. The great majority of unpaid family workers are farm laborers.

[1] See U.S. Department of Labor, Bureau of Employment Security, ictionary of Occupational Titles, Second Edition, Vols. I and , Washington, D.C., 1949.

List A.--RELATIONSHIP BETWEEN THE INDUSTRIAL CLASSIFICATION OF THE 1960 POPULATION CENSUS AND THE STANDARD INDUSTRIAL CLASSIFICATION

(This list shows the Population Census title, followed by code designations from the Standard Industrial Classification; see page IX for explanation. For descriptions of SIC codes, see Executive Office of the President, Bureau of the Budget, Standard Industrial Classification Manual, 1957)

Agriculture, forestry, and fisheries (01-09, except 0713).
Agriculture (01, 02, 07 exc. 0713).
Forestry (08).
Fisheries (09).

Mining (10-14).
Metal mining (10).
Coal mining (11, 12).
Crude petroleum and natural gas extraction (13).
Nonmetallic mining and quarrying, except fuel (14).

Construction (15-17).
Construction (15-17).

Manufacturing (19-39).
Logging (241).
Sawmills, planing mills, and mill work (242, 243).
Miscellaneous wood products (244, 249).
Furniture and fixtures (25).
Glass and glass products (321-323).
Cement, and concrete, gypsum, and plaster products (324, 327).
Structural clay products (325).
Pottery and related products (326).
Miscellaneous nonmetallic mineral and stone products (328, 329).

Blast furnaces, steel works, and rolling and finishing mills (3312, 3313).
Other primary iron and steel industries (3315-3317, 332, 3391, 3399).[1]
Primary nonferrous industries (333-336, 3392, 3399).[1]
Cutlery, hand tools, and other hardware (342).
Fabricated structural metal products (344).
Miscellaneous fabricated metal products (341, 343, 345-349, 19 except 194).
Not specified metal industries.[2]
Farm machinery and equipment (352).
Office, computing, and accounting machines (357).
Miscellaneous machinery (351, 353-356, 358, 359).
Electrical machinery, equipment, and supplies (36).

Motor vehicles and motor vehicle equipment (371).
Aircraft and parts (372).
Ship and boat building and repairing (373).
Railroad and miscellaneous transportation equipment (374, 375, 379).
Professional equipment and supplies (194, 381-385).
Photographic equipment and supplies (386).
Watches, clocks, and clockwork-operated devices (387).
Miscellaneous manufacturing industries (39).

Meat products (201).
Dairy products (202).
Canning and preserving fruits, vegetables, and sea foods (203).
Grain-mill products (0713, 204).
Bakery products (205).
Confectionery and related products (207).
Beverage industries (208).
Miscellaneous food preparations and kindred products (206, 209).
Not specified food industries.[2]
Tobacco manufactures (21).

Knitting mills (225).
Dyeing and finishing textiles, except wool and knit goods (226).
Floor coverings, except hard surface (227).
Yarn, thread, and fabric mills (221-224, 228).
Miscellaneous textile mill products (229).
Apparel and accessories (231-238).
Miscellaneous fabricated textile products (239).
Pulp, paper, and paperboard mills (261-263, 266).
Paperboard containers and boxes (265).
Miscellaneous paper and pulp products (264).
Newspaper publishing and printing (271).
Printing, publishing, and allied industries, except newspapers (272-279).

Synthetic fibers (2823, 2824).
Drugs and medicines (283).
Paints, varnishes, and related products (285).
Miscellaneous chemicals and allied products (281, 282 except 2823, 2824; 284, 286-289).
Petroleum refining (291).
Miscellaneous petroleum and coal products (295, 299).
Rubber products (301-303, 306).
Miscellaneous plastic products (307).
Leather: tanned, curried, and finished (311).
Footwear, except rubber (313, 314).
Leather products, except footwear (312, 315-317, 319).

Not specified manufacturing industries.[2]

Transportation, communication, and other public utilities (40-49).
Railroads and railway express service (40).
Street railways and bus lines (411, 413-415, 417).
Taxicab service (412).
Trucking service (421, 423).
Warehousing and storage (422).
Water transportation (44).
Air transportation (45).
Petroleum and gasoline pipe lines (46).
Services incidental to transportation (47).

Transportation, communication, and other public utilities (40-49)--Con.
Radio broadcasting and television (483).
Telephone (wire and radio) (481).
Telegraph (wire and radio) (482, 489).
Electric light and power, and electric-gas utilities (491. 493).[3]
Gas and steam supply systems (492, 496).
Water supply (494).
Sanitary services (495).
Other and not specified utilities (497).

Wholesale and retail trade (50-59).
Motor vehicles and equipment (501).
Drugs, chemicals, and allied products (502).
Dry goods and apparel (503).
Food and related products (504).
Farm products--raw materials (505).
Electrical goods, hardware, and plumbing equipment (506, 507).
Machinery, equipment, and supplies (508).
Petroleum products (5092).
Miscellaneous wholesale trade (5091, 5093-5099).
Not specified wholesale trade.[2]

Food and dairy products stores (54).[4]
General merchandise retailing (53 except 533).
Limited price variety stores (533).
Apparel and accessories stores, except shoe stores (56 except 566).
Shoe stores (566).
Furniture and housefurnishings stores (571).
Household appliance, TV, and radio stores (572, 573).
Motor vehicles and accessories retailing (55 except 554).
Gasoline service stations (554).

Drug stores (591).
Eating and drinking places (58).
Hardware and farm equipment stores (525).
Lumber and building material retailing (521-524).
Liquor stores (592).
Retail florists (5992).
Jewelry stores (597).
Fuel and ice dealers (598).
Miscellaneous retail stores (593-596, 599 except 5992).
Not specified retail trade.[2]

Finance, insurance, and real estate (60-67).
Banking and credit agencies (60, 61).
Security and commodity brokerage and investment companies (62, 67).
Insurance (63, 64).
Real estate (incl. real estate-insurance-law offices) (65, 66).

Business and repair services (73-76).
Advertising (731).
Miscellaneous business services (732-736, 739).
Automobile repair services and garages (75).
Miscellaneous repair services (76).

Personal services (70, 72, 88)
Private households (88).
Hotels and lodging places (70).
Laundering, cleaning, and dyeing services (721, 727).
Dressmaking shops (729).[5]
Shoe repair shops (725).
Barber and beauty shops (723, 724).
Miscellaneous personal services (722, 726, 729).[5]

Entertainment and recreation services (78, 79).
Theaters and motion pictures (78, 792).
Bowling alleys, and billiard and pool parlors (793).
Miscellaneous entertainment and recreation services (791, 794).

Professional and related services (80-86, 89).
Medical and other health services, except hospitals (80 except 806).
Hospitals (806).
Legal services (81).
Educational services, government } (82, 84).
Educational services, private }
Welfare and religious services (866, 867).
Nonprofit membership organizations (861-865, 869).
Engineering and architectural services (891).
Accounting, auditing, and bookkeeping services (893).
Miscellaneous professional and related services (892, 899).

Public administration (91-94).
Postal service } (91, 94).[6]
Federal public administration }
State public administration (92).
Local public administration (93).

Industry not reported (99).

[1] The components of SIC category 3399 are allocated between "Other primary iron and steel industries" and "Primary nonferrous industries" on a ferrous-nonferrous basis.
[2] In the Population Census system, "not specified" categories were set up within certain groups to take care of schedule returns which were not sufficiently precise for allocation to a specific category within the group.
[3] "Electric light and power" and "Electric-gas utilities" are combined into a single category.
[4] "Food stores, except dairy products" and "Dairy products stores and milk retailing" are combined into a single category.
[5] Dressmaking shops are separated from the rest of the SIC category 729 which is included in "Miscellaneous personal services."
[6] The components of SIC category 9190 are defined as the regular government functions--executive, legislative, and judicial--so that 9190 may appear in both "Postal service" and "Federal public administration."

The relatively small number of employed persons for whom class of worker was not reported have been included among private wage and salary workers unless there was evidence on the census schedule that they should have been classified in one of the other class-of-worker categories.

Special Editing Procedures

A factor to be considered in the interpretation of these data is that respondents sometimes returned occupation and industry designations which were not sufficiently specific for precise allocation. Indefinite occupation and industry returns were frequently assigned, however, to the appropriate category through the use of supplementary information. For example, the name of the employer or the industry entry on the census schedule was often of great assistance in determining occupation. The name of the employer (company name) was used extensively to assign the proper industrial classification through the use of lists of employers which show their industrial classification in the 1958 Economic Censuses. In the coding of indefinite industry entries, helpful information was frequently obtained from other sources regarding the types of industrial activity in the given area or of the given company.

Comparability

Earlier censuses.--Changes in schedule design and interviewing techniques between 1950 and 1960 may have affected comparability for some of the occupation, industry, and class-of-worker categories. For example, a person may report his own job activities differently in self-enumeration wherein a person is given the opportunity to report for himself, as contrasted to the 1950 direct enumeration procedure, where job descriptions are normally obtained in an interview with a member of the worker's family (oftentimes his wife).

The occupational and industrial classification systems used in 1940 and 1950 are basically the same as those of 1960. There are a number of differences, however, in the title and content for certain items, as well as in the degree of detail shown for various major groups. In 1930 and earlier censuses, the occupational and industrial classification systems were markedly different from the 1960 systems. The 1940 and 1950 classification by class of worker is comparable with the 1960 classification system. The following publications contain much helpful information on the various factors of comparability and are particularly useful for understanding differences in the occupation and industry information from earlier censuses: U.S. Bureau of the Census, Sixteenth Census Reports, Population, Comparative Occupation Statistics for the United States, 1870 to 1940, 1943, and Bureau of the Census Working Paper No. 5, Occupational Trends in the United States, 1900 to 1950, 1958.

Current Population Survey.--To show the consistency between the original 25-percent sample and the April 1960 CPS, the percent of employed persons in the major occupation groups is compared in table A. The base of the percentages from the census excludes workers who did not report their occupation.

The differences that exist between the national data from the Population Census and the CPS are due to a number of factors. Among these are the more extensive training, control, and experience of the CPS interviewers than of the census enumerators; differences in the time period to which the labor force data apply (the CPS covering the week containing the 12th of the month; the census, the week prior to the date the respondent filled his questionnaire or was interviewed); differences in question wording and format of the schedules; differences in the methods used to process the original data into statistical tables; differences in the weighting procedure and in the population controls; differences in noninterview rates and their treatment; and the sampling variability in the CPS and in the 5-percent sample used for this report.

Table A.—PERCENT DISTRIBUTION OF EMPLOYED PERSONS BY MAJOR OCCUPATION GROUP, ACCORDING TO 1960 CENSUS AND TO APRIL 1960 CURRENT POPULATION SURVEY

Major occupation group	Census (25-percent sample)	CPS
Total employed	100.0	100.0
Professional, technical, & kindred wkrs.	11.8	11.4
Farmers and farm managers	4.1	4.3
Managers, off'ls, & propr's, exc. farm	8.8	10.5
Clerical and kindred workers	15.1	14.6
Sales workers	7.6	6.7
Craftsmen, foremen, & kindred workers	14.2	13.0
Operatives and kindred workers	19.4	18.1
Private household workers	2.8	3.3
Service workers, exc. priv. household	8.9	9.3
Farm laborers and foremen	2.3	3.4
Laborers, exc. farm and mine	5.0	5.4

Shown below are figures indicating the consistency with respect to the proportion of the total employed who were in two of the major industry groups:

	Census (25-percent sample)	CPS
Agriculture	6.6	8.2
Nonagricultural industries	93.4	91.8

For those employed in agriculture, the census showed a substantially smaller proportion as unpaid family workers, and for those employed in nonagricultural industries, the census showed a somewhat smaller proportion as self-employed workers. For further comparisons of CPS and census data, see section below on "Quality of data on occupation and industry."

Other data.--Comparability between statistics presented in this report and statistics from other sources is frequently affected by differences in concepts and definitions. Because the 1960 Census employment data were obtained from households, they differ from statistics based on reports from individual business establishments, farm enterprises, and certain government programs. In data shown here, persons employed at more than one job are counted only once as employed and are classified according to the job at which they worked the greatest number of hours during the reference week. In statistics based upon reports

from business and farm establishments, on the other hand, persons who work for more than one establishment may be counted more than once. Moreover, other data, unlike those presented here, generally exclude private household workers, unpaid family workers, and self-employed persons, and may include workers less than 14 years of age. An additional difference arises from the fact that persons with a job but not at work are included with the employed in the statistics shown here, whereas only part of this group is likely to be included in employment figures based on establishment payroll reports.

In addition, comparability between statistics presented in this report and statistics from other sources is frequently affected by the use of different classification systems, as well as by many other factors. Occupation figures from the Population Census are not always directly comparable with data from government licensing agencies, professional associations, trade unions, etc. Among the sources of difference may be the inclusion in the organizational listing of retired persons or persons devoting all or most of their time to another occupation, the inclusion of the same person in two or more different listings, and the fact that relatively few organizations attain complete coverage of membership in an occupation field.

For additional reasons for differences between census data and data from other sources, see section below on "Quality of data on occupation and industry."

Quality of Data on Occupation and Industry

Many of the figures shown here are probably subject to some understatement because of the omission of some marginal workers from the count of employed persons. For example, housewives, students, and semi-retired persons, who are in the labor force on only a part-time or intermittent basis, may fail to report they are employed. These omissions arise from the difficulty of applying certain of the employment status concepts, and, perhaps more important, from the fact that complete information is not always obtained for certain groups. The largest relative difference in the number of persons in the labor force in the 1960 Census and the Current Population Survey was for the age group 14 to 24 years old. This group has a large proportion of persons who work part time and who, therefore, may fail to report that they are employed.

A measure of this understatement is provided by a comparison with the data from the Current Population Survey as shown in table B. The estimated size of the employed population in the United States based on the Current Population Survey is slightly over 2 percent above the corresponding census figures. However, this represents a considerable improvement over the 1950 comparison in which the CPS figure exceeded the census figure by about 5 percent.

Such differences occur more in industries, such as agriculture, trade, and personal services, where part-time or occasional work is widely prevalent. These are the groups for which variability in response is relatively great in labor force data collected from households.

The application of detailed occupational and industrial classifications to approximately 65 million workers is obviously subject to some error. Although the number of misclassifications probably does not have any serious effect on the usefulness of most of the data, there are a few cases where relatively small numbers of erroneous returns may produce what might be regarded as a serious misstatement of the facts. Some of the more obvious misclassifications have been edited, but it was not possible to perform a complete review of the data for all discrepancies.

More information on quality of the data will be available after various census evaluation projects are completed.

Table B.--COMPARISON OF EMPLOYMENT STATUS OF THE CIVILIAN NONINSTITUTIONAL POPULATION: 1960 CENSUS AND APRIL 1960 CPS

(Thousands of persons 14 years of age and over)

Employment status	Census[1] (25-percent sample)	April CPS	Difference	
			Number	Percent of CPS
Total.....	122,783	122,406	+377	+0.3
Labor force.....	68,144	69,819	-1,675	-2.4
Employed.....	64,639	66,159	-1,520	-2.3
Agriculture.....	4,257	5,393	-1,136	-21.1
Nonagriculture.....	60,382	60,766	-384	-0.6
Unemployed.....	3,505	3,660	-155	-4.2
Not in labor force.....	54,639	52,587	+2,052	+3.9

COLLECTION AND PROCESSING OF DATA

COLLECTION OF DATA

Several enumeration forms were used to collect the information for the 1960 Census of Population. A few days before the census date, the Post Office Department delivered an Advance Census Report (ACR) to households on postal delivery routes. This form contained questions which were to be answered for every person and every housing unit. Household members were requested to fill the ACR and have it ready for the enumerator. The census enumerator recorded this information on a form specially designed for electronic data processing by FOSDIC (Film Optical Sensing Device for Input to Computer). The information was either transcribed from the ACR to the complete-count FOSDIC schedule or entered on this schedule during direct interview.

In the densely populated areas, the enumerator left a Household Questionnaire to be completed by each household (or person) in the sample and mailed to the local census office. The population and housing information was transcribed from the Household Questionnaire to a sample FOSDIC schedule. When the Household Questionnaire was not returned or was returned

without having been completed, the enumerator collected the missing information by personal visit or by telephone and entered it directly on the sample FOSDIC schedule. In the remaining areas, when the enumerator picked up the ACR, he obtained all the information by direct interview and recorded it directly on the sample FOSDIC schedule.

Soon after the enumerator started work, his schedules were examined in a formal field review. This operation was designed to assure at an early stage of the work that the enumerator was performing his duties properly and had corrected any errors he had made.

More detailed descriptions of the 1960 Census procedures in the collection and processing of the data are given in reports entitled United States Censuses of Population and Housing, 1960: Principal Data Collection Forms and Procedures, 1961; and Processing the Data, 1962, U.S. Government Printing Office, Washington 25, D.C.

ELECTRONIC PROCESSING

Several steps were required to process the data. First, the enumerator recorded the information by marking appropriate circles on the FOSDIC schedules. These schedules were later microfilmed and the information was read by FOSDIC, which converted the markings to signals on magnetic tape. The tape, in turn, was processed in an electronic computer, which was used extensively to edit and tabulate the data and to produce the publication tables.

EDITING

For a majority of items, nonresponses and inconsistencies were eliminated by using the computer to assign entries and correct inconsistencies. In general, few assignments or corrections were required, although the amount varied by subject and by enumerator.

The assignment of an acceptable entry by machine was based on related information reported for the person or on information reported for a similar person in the immediate neighborhood. For example, in the assignment of age in the complete-count tabulations, the computer stored reported ages of persons by sex, color or race, household relationship, and marital status; each stored age was retained in the computer only until a succeeding person having the same characteristics and having age reported was processed through the computer; this stored age was assigned to the next person whose age was unknown and who otherwise had the same characteristics. This procedure insured that the distribution of ages assigned by the computer for persons of a given set of characteristics would correspond closely to the reported age distribution of such persons as obtained in the current census.

The extent of the allocations for nor esponse or for inconsistency is shown for States, places of 10,000 inhabitants or more, and other areas in appendix tables in chapters B, C, and D of 1960 Census of Population, Volume I, Characteristics of the Population.

Specific tolerances were established for the number of computer allocations acceptable for a given area. If the number was beyond tolerance, the data were rejected and the original schedules were reexamined to determine the source of the error. Correction and reprocessing were undertaken as necessary and feasible.

It was decided that because of the great variety of occupations and industries, allocation for omission of entries was not feasible. Therefore, persons whose occupation and industry information was lacking were generally classified as "not reported." However, certain assignments of occupation and industry codes were made in cases of omissions and inconsistencies. This assignment was done on the basis of the acknowledged relationships existing between certain occupations, industries, and class of work. For example, a person who reported himself as a farmer was assigned to the agricultural industry.

ACCURACY OF THE DATA

Human and mechanical errors occur in any mass statistical operation such as a decennial census. Such errors include failure to obtain required information from respondents, obtaining inconsistent information, recording information in the wrong place or incorrectly, or otherwise producing inconsistencies between entries on interrelated items on the field documents. Sampling biases occur because some of the enumerators fail to follow the sampling instructions. Clerical coding and editing errors occur, as well as errors in the electronic processing operation.

Careful efforts are made in every census to keep the errors in each step at an acceptably low level. Review of the enumerator's work, verification of manual coding and editing, checking of tabulated figures, and ratio estimation of sample data to control totals from the complete count reduce the effects of the errors in the census data.

Very minor differences between tables in this report or between corresponding data in this report and chapters C and D of Volume I, Characteristics of the Population, result from imperfections in the electronic equipment. No attempt has been made to reconcile these minor discrepancies.

Some innovations in the 1960 Censuses reduced errors in processing and others produced a more consistent quality of editing. The elimination of the card-punching operation removed one important source of error. The extensive use of electronic equipment insured a more uniform and more flexible edit than could have been accomplished manually or by less intricate mechanical equipment. It is believed that the use of electronic equipment in the 1960 Censuses has improved the quality of the editing compared with that of earlier censuses but, at the same time, it has introduced an element of difference in the statistics.

A group of reports designated "Evaluation and Research Series" will deal with the methods, results, and interpretation of a group of evaluation and research studies of the 1960 Censuses of Population and Housing. A report entitled The Post-Enumeration Survey: 1950, Technical Paper No. 4, presents evaluative material on the 1950 Census.

MANUAL CODING AND EDITING

After the sample schedules had been assembled and checked for completeness in the field, they were sent to the central processing office in Jeffersonville, Ind., for manual coding and microfilming. A specialized group of clerks assigned codes for the written occupation and industry entries. The clerks were provided with lists of names of large companies and their industrial classifications, as well as the 1960 Alphabetical Index of Occupations and Industries. The class-of-worker entry was edited for consistency with occupation and industry.

The principles of quality control were applied in the manual editing and coding operation, just as they were used in the review of enumeration work and in certain other operations. Thus, in the first stage of the coding operation, one-fifth of the work of each occupation and industry coder was verified by an examination of his work during the first few weeks of his assignment, that is, before he was eligible to be rated as "qualified." In the second stage, one-fortieth of the work of the occupation and industry coders was checked by two verifiers, each of whom did the work independently and did not see the work of the coder or of the other verifier. If the work done by a coder in the early phase was rejected on the basis of either or both of these checks, his work was verified completely. If the coder's work failed to qualify after a reasonable period of time he was removed from the coding operation.

After the coder qualified, control of his work was based on the results of the independent verification in which the majority rule among the coder and two verifiers was used to determine whether the coder had made an error.

The purpose of the independent verification was to assure that the quality of the coder's work did not deteriorate, and, for those whose quality did deteriorate, to identify them quickly and retrain them or remove them from the operation. The error rate of trained coders for the three items combined (occupation, industry, and class of worker) was 8.4 percent. Thus, the average error for any of the individual items making up the total number of coding errors was 2.8 percent. However, there is probably a differential error rate among the three items, since it is evident that coding of occupation or industry is much more difficult than coding class of worker. In addition, provision was made for correction of all work of the coders who showed very high weekly error rates. Information on error rates by individual occupation and industry categories is not yet available.

SAMPLE DESIGN AND SAMPLING VARIABILITY

SAMPLE DESIGN

For persons in housing units at the time of the 1960 Census, the sampling unit was the housing unit and all its occupants; for persons in group quarters, it was the person. On the first visit to an address, the enumerator assigned a Sample Key Letter (A, B, C, or D) to each housing unit sequentially in the order in which he first visited the units, whether or not he completed an interview. Each enumerator was given a random key letter to start his assignment, and the order of canvassing was indicated in advance, although these instructions allowed some latitude in the order of visiting addresses. Each housing unit to which the key letter "A" was assigned was designated as a sample unit, and all persons enumerated in the unit were included in the sample. In every group quarters, the sample consisted of every fourth person in the order listed.

The 1960 statistics in this report are based on a subsample of one-fifth of the original 25-percent sample schedules. The subsample was selected on the computer, using a stratified systematic sample design. The strata were made up as follows: For persons in regular housing units there were 36 strata, i.e., 9 household-size groups by 2 tenure groups by 2 color groups; for persons in group quarters, there were 2 strata, i.e., the 2 color groups.

Although the sampling procedure did not automatically insure an exact 5-percent sample of persons, the sample design was unbiased if carried through according to instructions. Generally, for large areas, the deviation from the estimated sample size was found to be quite small. Biases may have arisen, however, when the enumerator failed to follow his listing and sampling instructions exactly.

Table C compares the distribution by major occupation group of employed persons, as presented in this report, based on the 5-percent sample with corresponding statistics based on the 25-percent sample presented in Volume I of the 1960 Census of Population. Table D presents a similar comparison for major industry group. Differences in each of these tables reflect primarily sampling error. This is relatively small and should have little influence on the interpretation of the data.

RATIO ESTIMATION

The statistics based on the 5-percent sample of the 1960 Census returns are estimates that have been developed through the use of a ratio estimation procedure. This procedure was carried out for each of the following 44 groups of persons in each of the sample weighting areas.[2]

---

[2] Estimates of characteristics from the sample for a given sample weighting area are produced using the formula:

$$x' = \sum_{i=1}^{44} \frac{x_i}{y_i} Y_i$$

where x' is the estimate of the characteristic for the sample weighting area obtained through the use of the ratio estimation procedure,

x_i is the count of sample persons with the characteristic for the area in one (i) of the 44 groups,

y_i is the count of all sample persons for the area in the same one of the 44 groups, and

Y_i is the count of persons in the complete count for the area in the same one of the 44 groups.

Table C.--OCCUPATION--COMPARISON OF 25-PERCENT AND 5-PERCENT SAMPLE DATA ON MAJOR OCCUPATION GROUP OF EMPLOYED PERSONS, BY SEX, FOR THE UNITED STATES: 1960

Major occupation group and sex	25-percent sample	5-percent sample	Percent distribution		Ratio of 25-percent sample number to 5-percent sample number
			25-percent sample	5-percent sample	
Male, employed	43,466,955	43,490,888	100.0	100.0	0.999
rofessional, technical, and kindred workers	4,479,358	4,473,300	10.3	10.3	1.001
armers and farm managers	2,387,584	2,392,247	5.5	5.5	0.998
anagers, officials, and proprietors, except farm	4,629,842	4,627,827	10.6	10.6	1.000
lerical and kindred workers	3,015,476	3,027,732	6.9	7.0	0.996
ales workers	2,977,872	2,983,675	6.8	6.9	0.998
raftsmen, foremen, and kindred workers	8,488,777	8,500,579	19.5	19.5	0.999
peratives and kindred workers	8,641,652	8,663,746	19.9	19.9	0.997
rivate household workers	61,063	60,396	0.1	0.1	1.011
ervice workers, except private household	2,598,673	2,599,758	6.0	6.0	1.000
arm laborers and foremen	1,201,922	1,195,004	2.9	2.7	1.006
aborers, except farm and mine	2,997,785	2,982,858	6.9	6.9	1.005
ccupation not reported	1,986,951	1,983,766	4.6	4.6	1.002
Female, employed	21,172,301	21,155,675	100.0	100.0	1.001
rofessional, technical, and kindred workers	2,753,052	2,749,941	13.0	13.0	1.001
armers and farm managers	118,100	115,925	0.6	0.5	1.019
anagers, officials, and proprietors, except farm	779,701	780,063	3.7	3.7	1.000

Group	Sex, color, and age	Relationship and tenure
	Male white:	
1	Under 5	
2	5 to 13	
3	14 to 24	Head of owner household
4	14 to 24	Head of renter household
5	14 to 24	Not head of household
6-8	25 to 44	Same groups as age group 14 to 24
9-11	45 and over	Same groups as age group 14 to 24
	Male nonwhite:	
12-22	Same groups as Male white	
	Female white:	
23-33	Same groups as Male white	
	Female nonwhite:	
34-44	Same groups as Male white	

The sample weighting areas were defined as those areas within a State consisting of central cities of urbanized areas, the remaining portion of urbanized areas not in central cities, urban places not in urbanized areas, or rural areas.[3]

For each of the 44 groups, the ratio of the complete count to the sample count of the population in the group was determined. Each specific sample person in the group was assigned an integral weight so that the sum of the weights would equal the complete count for the group. For example, if the ratio for a group was 20.1 one-tenth of the persons (selected at random) within the group were assigned a weight of 21, and the remaining nine-tenths a weight of 20. The use of such a combination of integral weights rather than a single fractional weight was adopted to avoid the complications involved in rounding in the final tables. In order to increase the reliability, where there were fewer than 275 persons in the complete count in a group, or where the resulting weight was over 80, groups were combined in a specific order to satisfy both of these two conditions.

These ratio estimates reduce the component of sampling error arising from the variation in the size of household and achieve some of the gains of stratification in the selection of the sample, with the strata being the groups for which separate ratio estimates are computed. The net effect is a reduction in the sampling error and bias of most statistics below what would be obtained by weighting the results of the 5-percent sample by a uniform factor of 20. The reduction in sampling error will be trivial for some items and substantial for others. A by-product of this estimation procedure, in general, is that estimates for this sample are generally consistent with the complete count with respect to the total population and for the subdivisions used as groups in the estimation procedure. A more complete discussion of the technical aspects of these ratio estimates will be presented in another report.

[3] For the definitions of urbanized area and urban place, see 1960 Census of Population, Volume I, Characteristics of the Population, Part 1, U.S. Summary.

SAMPLING VARIABILITY

The figures from the 5-percent sample tabulations are subject to sampling variability, which can be estimated roughly from the standard errors shown in tables E and F below. These tables[4] do not reflect the effect of response variance, processing variance, or bias arising in the collection, processing, and estimation steps. Estimates of the magnitude of some of these factors in the total error are being evaluated and will be published at a later date. The chances are about two out of three that the difference due to sampling variability between an estimate and the figure that would have been obtained from a complete count of the population is less than the standard error. The chances are about 19 out of 20 that the difference is less than twice the standard error and about 99 out of 100 that it is less than 2½ times the standard error. The amount by which the estimated standard error must be multiplied to obtain other odds deemed more appropriate can be found in most statistical textbooks.

Table E.—ROUGH APPROXIMATION TO STANDARD ERROR OF ESTIMATED NUMBER

(Range of 2 chances out of 3)

Estimated number	Standard error	Estimated number	Standard error
50	30	5,000	280
100	40	10,000	390
250	60	15,000	480
500	90	25,000	620
1,000	120	50,000	880
2,500	200		

Table F.—ROUGH APPROXIMATION TO STANDARD ERROR OF ESTIMATED PERCENTAGE

(Range of 2 chances out of 3)

Estimated percentage	Base of percentage					
	500	1,000	2,500	10,000	25,000	100,000
2 or 98	3.3	2.3	1.3	0.8	0.3	0.3
5 or 95	5.0	4.0	2.3	1.0	0.5	0.3
10 or 90	7.0	5.0	3.0	1.5	0.8	0.5
25 or 75	10.0	6.8	3.8	1.8	1.0	0.5
50	11.0	7.8	4.0	2.0	1.3	0.8

Table E shows rough standard errors of estimated numbers up to 50,000. The relative sampling errors of larger estimated numbers are somewhat smaller than for 50,000. For estimated numbers above 50,000, however, the nonsampling errors, e.g., response errors and processing errors, may have an increasingly important effect on the total error. Table F shows rough standard errors of percentages. Linear interpolation in tables E and F will provide approximate results that are satisfactory for most purposes.

[4] The estimates of sampling variability are based on calculations from a preliminary sample of the 1960 Census results. Further estimates are being calculated and will be available at a later date.

The standard errors estimated from tables E and F are not directly applicable to differences between two sample estimates. These tables are to be applied in the three following situations as indicated:

1. For a difference between the sample figure and one based on a complete count (e.g., arising from comparisons between 1960 statistics and complete-count statistics for 1950 or 1940), the standard error is identical with the standard error of the 1960 estimate alone.

2. For a difference between two sample figures (that is, one from 1960 and the other from 1950, or both from the same census year), the standard error is approximately the square root of the sum of the squares of the standard error of each estimate considered separately. This formula will represent the actual standard error quite accurately for the difference between estimates of the same characteristics in two different areas, or for the difference between separate and uncorrelated characteristics in the same area. If, however, there is a high positive correlation between the two characteristics, the formula will overestimate the true standard error. The approximate standard error for the 1960 sample figure is derived directly from table E or F. The standard error of a 3 1/3-percent 1950 sample figure may be obtained from the relevant 1950 Census report, or an approximate value may be obtained by multiplying by 1.2, the appropriate value in table E or F.

3. For a difference between two sample estimates, one of which represents a subclass of the other, table E or F (whichever is appropriate) can be used directly, with the difference considered as the sample estimate.

Illustration: Table 1 shows that there are 24,793 female clerical and kindred workers 18 and 19 years old employed in public administration. Table E shows that the standard error for an estimate of 24,793 is about 617, which means that the chances are approximately 2 out of 3 that the results of a complete census would not differ by more than 617 from this estimated 24,793. It also follows that there is only about 1 chance in 100 that a complete census would differ by as much as 1,542, that is, by about 2½ times the number estimated from table E.

Table 1.--MAJOR OCCUPATION GROUP OF EMPLOYED PERSONS, BY MAJOR INDUSTRY GROUP, AGE, AND SEX, FOR THE UNITED STATES: 1960

PREFACE

This report presents statistics from the 1960 Census of Population on social and economic characteristics of teachers. Teachers at the college level are classified by specified fields of instruction and teachers below college level according to level and type of school. The characteristics shown include urban-rural residence, race, age, years of school completed, marital status, presence of own child, occupation of the teacher's spouse, earnings in 1959, and family income in 1959. Most of these data are presented for regions as well as for the Nation as a whole. Legal provision for this census, which was conducted as of April 1, 1960, was made in the Act of Congress of August 31, 1954 (amended August 1957), which codified Title 13 U.S. Code.

The major portion of the information compiled from the 1960 Census of Population appears in Volume I, Characteristics of the Population, which contains data for the United States, States and counties and their urban and rural parts, cities, minor civil divisions, etc. The present report is part of Volume II, Subject Reports, and is designated as PC(2)-7D. A list of the Volume II Subject Reports appears on the inside of the front cover. A summary description of all the final reports of the 1960 Population Census appears on page IV.

ACKNOWLEDGMENTS

A large number of persons participated in the various activities of the 1960 Census of Population. Primary responsibilities were exercised by many of the persons listed on the preceding page. Within the Population, Demographic Operations, Field, Geography, and Statistical Methods Divisions, most of the staff members worked on the program. Important contributions were also made by the staffs of the Administrative Service Division, Everett H. Burke, Chief; Budget and Finance Division, William E. Stiver, Chief; Data Processing Systems Division, Robert F. Drury, Chief; Jeffersonville Census Operations Office, Robert D. Krook, Chief; Personnel Division, James P. Taff, Chief; and Statistical Research Division, William N. Hurwitz, Chief.

Stanley Greene, Chief, William J. Milligan, and Thomas C. Walsh of the Economic Statistics Branch and Charles B. Nam, Chief, Education and Social Stratification Branch, Population Division, had the major responsibility for planning this report and developing its content. John C. Beresford provided liaison with the operations staff, Elizabeth A. Larmon assisted in the preparation of the introductory text, and Mildred M. Russell and Leah S. Anderson performed the technical editorial work. The procedures for compiling the data were devised by Patience Lauriat, Catherine M. Neafsey, Alfonso F. Episcopo, and Thomas H. LaFerrara of the Demographic Operations Division. The sampling materials were prepared by Robert Hanson and Robert H. Finch, Jr., of the Statistical Methods Division.

The census program was designed in consultation with a number of advisory committees and many individuals in order to maximize the usefulness of the data. Among the groups organized for this purpose were the Technical Advisory Committee for the 1960 Population Census, the Council of Population and Housing Census Users, and the Federal Agency Population and Housing Census Council (sponsored by the U.S. Bureau of the Budget). The persons who served with these groups represented a wide range of interest in the census program; their affiliations included universities, private industry, research organizations, labor groups, Federal agencies, State and local governments, and professional associations.

Tabulation of the data in this report was supported, in part, by funds provided by the Cooperative Research Program of the U.S. Office of Education to Florida State University in connection with a research project which will contribute to the 1960 Census Monograph on education. The monograph, which is being prepared by John K. Folger of the University and Charles B. Nam of the Census Bureau, is one in the series sponsored by the Social Science Research Council and the Bureau of the Census.

March 1964.

FINAL REPORTS OF THE 1960 CENSUS OF POPULATION

The final reports of the 1960 Population Census are arranged in three volumes and a joint Population-Housing series of census tract reports. The 1960 Population Census publication program also includes preliminary, advance, and supplementary reports, certain evaluation, procedural, and administrative reports, and graphic summaries. After publication, copies of all reports are available for examination or purchase at any U.S. Department of Commerce Field Office.

Certain types of unpublished statistics are available for the cost of preparing a copy of the data. Also, under certain conditions, special tabulations of the 1960 Census data can be prepared on a reimbursable basis. In addition, there are available for purchase magnetic tapes and punchcards containing 1960 Census information on the characteristics of a one-in-a-thousand and a one-in-ten-thousand sample of the population of the United States. Confidentiality of the information, as required by law, has been maintained by the omission of certain identification items. Further information about any of these materials can be obtained by writing to the Chief, Population Division, Bureau of the Census, Washington, D.C., 20233.

Volume I. Characteristics of the Population. This volume consists of separate reports for the United States, each of the 50 States, the District of Columbia, Puerto Rico, Guam, Virgin Islands, American Samoa, and Canal Zone. For each of these 57 areas, the data were first issued in four separate paper-bound "chapters," designated as PC(1)-A, B, C, and D. (For Guam, Virgin Islands, American Samoa, and Canal Zone, the material normally contained in chapters B, C, and D are included in chapter B.) For library and general reference use, the paper-bound reports have been assembled and reissued in buckram-bound books identified as Parts A and 1 to 57 of Volume I.

Series PC(1)-1A to 57A: Chapter A. Number of Inhabitants. These reports contain final population counts for States and counties and their urban and rural parts, and for standard metropolitan statistical areas, urbanized areas, all incorporated places, unincorporated places of 1,000 inhabitants or more, and minor civil divisions.

Series PC(1)-1B to 57B: Chapter B. General Population Characteristics. These reports present statistics on sex, age, marital status, color or race, and relationship to head of household for States and counties and their urban and rural parts, and for standard metropolitan statistical areas, urbanized areas, places of 1,000 inhabitants or more, and minor civil divisions.

Series PC(1)-1C to 53C: Chapter C. General Social and Economic Characteristics. These reports cover the subjects of nativity and parentage, State of birth, country of origin of the foreign stock, mother tongue, place of residence in 1955, year moved into present house, school enrollment by level and type, years of school completed, families and their composition, fertility, veteran status, employment status, weeks worked in 1959, year last worked, occupation group, industry group, class of worker, place of work, means of transportation to work, and income of persons and families. Each subject is shown for some or all of the following areas: States and counties and their urban, rural-nonfarm, and rural-farm parts, standard metropolitan statistical areas, urbanized areas, and urban places.

Series PC(1)-1D to 53D: Chapter D. Detailed Characteristics. These reports present most of the subjects covered in chapter C, above, cross-classified by age, color, and other characteristics. There is also included additional information on families, as well as data on single years of age, detailed occupation, and detailed industry. Each subject is shown for some or all of the following areas: States and their urban, rural-nonfarm, and rural-farm parts; and large counties, cities, and standard metropolitan statistical areas.

Volume I, Part A: Number of Inhabitants. This is a compendium of the 57 chapter A reports, i.e., PC(1)-1A to 57A.

Volume I, Parts 1 to 57: Characteristics of the Population. The 57 parts relate respectively to the United States, each of the 50 States, District of Columbia, Puerto Rico, Guam, Virgin Islands, American Samoa, and Canal Zone. Each part contains the data previously published in the four chapters A, B, C, and D, and is in the form of a separate, buckram-bound book. Parts 54, 55, 56, and 57--for Guam, Virgin Islands, American Samoa, and Canal Zone, respectively--are bound in a single book.

Volume II (Series PC(2) reports). Subject Reports. Each report in this volume concentrates on a particular subject. Detailed information and cross-relationships are generally provided on a national and regional level; in a few reports data for States or standard metropolitan statistical areas are also shown. Among the characteristics covered are ethnic origin and race, fertility, families, migration, education, employment, unemployment, occupation, industry, and income. There is also a report on the geographic distribution and characteristics of inmates of institutions. A list of reports is given on the inside of the front cover.

Volume III (Series PC(3) reports). Selected Area Reports. Three of the reports in this volume present selected characteristics of the population (1) for State economic areas, (2) for standard metropolitan statistical areas, and (3) according to the size of place where the individual resided. A fourth report provides data on the social and economic characteristics of Americans overseas.

Series PHC(1). Census Tract Reports. These reports present information on both population and housing subjects. There is one report for each of 180 tracted areas in the United States and Puerto Rico. The population subjects include age, race, marital status, country of origin of the foreign stock, relationship to head of household, school enrollment, years of school completed, place of residence in 1955, employment status, occupation group, industry group, place of work, means of transportation to work and income of families, as well as certain characteristics of the nonwhite population in selected tracts. The housing subjects include tenure, color of head of household, vacancy status, condition and plumbing facilities, number of rooms, number of bathrooms, number of housing units in structure, year structure built, basement, heating equipment, number of persons in unit, persons per room, year household head moved into unit, automobiles available, value of property, and gross and contract rent, as well as certain characteristics of housing units with nonwhite household head for selected tracts. In addition, for selected tracts these reports contain data on certain population and housing subjects for persons of Puerto Rican birth or parentage and for white persons with Spanish surname. (This series is the same as the tract reports listed in the publication program for the 1960 Census of Housing.)

1.--Residence of teachers in the experienced civilian labor force, by occupation, race, and sex, for the United States and the South: 1960	1
2.--Residence and age of teachers in the experienced civilian labor force, by occupation and sex, for the United States, by regions: 1960	4
3.--Age of teachers in the experienced civilian labor force, by occupation and sex, for the United States, by regions: 1960	8
4.--Years of school completed by teachers below college level in the experienced civilian labor force, by occupation, residence, age, color, and sex, for the United States, by regions: 1960	13
5.--Marital status and presence of own children under 18 in own household for women teachers in the experienced civilian labor force, by occupation and color, for the United States, by regions: 1960	19
6.--Occupation of husband or wife--Teachers in the experienced civilian labor force, by occupation, color, and sex, for the United States, by regions: 1960	23
7.--Earnings in 1959 of teachers in the experienced civilian labor force, by occupation, age, and sex, for the United States, by regions: 1960	33
8.--Earnings in 1959 by teachers in the experienced civilian labor force who worked 27 weeks or more in 1959, by occupation and sex, for the United States, by regions: 1960	40
9.--Earnings in 1959 of nonwhite teachers in the experienced civilian labor force, by occupation and sex, for the United States: 1960	42
10.--Earnings in 1959 by teachers below college level in the experienced civilian labor force, by occupation, years of school completed, age, color, and sex, for the United States: 1960	43
11.--Family income in 1959 of teachers in families and in the experienced civilian labor force, by occupation, income in 1959 of persons, color, and sex, for the United States and the South: 1960	48
12.--Year last worked by teachers in the labor reserve, by occupation, age, and sex, for the United States: 1960	53
13.--Year last worked by teachers below college level in the labor reserve, by occupation, years of school completed, age, and sex, for the United States: 1960	56
14.--Married elementary and secondary women school teachers 20 to 34 years old in the labor reserve, by age, color, year last worked, and age of own children, for the United States: 1960	58

REGIONS AND GEOGRAPHIC DIVISIONS OF THE UNITED STATES

Characteristics of Teachers

GENERAL

This report presents detailed national and regional statistics on various social and economic characteristics of school and college teachers. In this report, teachers are classified into 21 specific groups, covering college presidents and deans, college professors and instructors by specified fields of instruction, and teachers below college level according to level and type of school. The statistics are based on a 5-percent sample of the population enumerated in the Eighteenth Decennial Census of Population, taken as of April 1, 1960.

To describe the demographic and social characteristics of teachers, data are presented for teachers in the experienced civilian labor force on such personal characteristics as race, color, age, years of school completed, marital status, and presence of children of women teachers who have ever been married. Also presented are statistics on type of residence, occupation of the teacher's spouse, earnings in 1959, and family income in 1959. These statistics are presented for the Nation as a whole and for regions.

Statistics are also presented for persons in the labor reserve whose last occupation was that of a teacher. Data for these persons are presented on such characteristics as age, color, years of school completed, year last worked, family income in 1959, and age of own children for married women.

RELATED MATERIALS

1960 Census reports.--Statistics based on a 25-percent sample, for teachers as well as for persons in other occupations, are presented for individual States and for the United States in the 1960 Census of Population, Series PC(1)-C reports, "General Social and Economic Characteristics," and the Series PC(1)-D reports, "Detailed Characteristics." These reports form two of the four chapters of 1960 Census of Population, Volume I, Characteristics of the Population. Part 1 of Volume I presents data originally published in the four separate United States Summary reports; the remainder of the volume is divided into a part for each State and for the outlying areas, containing the data originally published in the separate paper-bound series.

In these reports and in most of the other Volume II reports mentioned below, data for teachers are shown in broader groupings (usually four) rather than the 21 detailed groups presented in this report. In Volume I, such condensed groupings are presented for the country as a whole, each State, standard metropolitan statistical area, urban place, and county. Cross-classifications of occupational data in Volume I are shown with earnings in 1959, year last worked, industry, age, and place of work. Data shown in the present report provide additional and more detailed cross-classifications than those in Volume I.

Several of the other Volume II reports--also designated as Series PC(2)--include data on teachers. The report PC(2)-7A, Occupational Characteristics, includes tables showing the 21 detailed groups of teachers and covers such subjects as urban-rural residence, age, race, sex, mobility, years of school completed, marital status, size of family, hours worked, class of worker, weeks worked in 1959, and income received in 1959. The report PC(2)-7B, Occupation by Earnings and Education, presents national and regional statistics on educational attainment and earnings in 1959 for male teachers between the ages of 18 and 64 years. The report PC(2)-7C, Occupation by Industry, includes detailed national statistics cross-classifying employed teachers by industry.

Two other PC(2) reports contain data on workers in the teaching profession in relation to the subject of the report. One report, PC(2)-5B, Educational Attainment, has been published; and the other report, which treats the social and economic characteristics of professional workers, is scheduled for publication.

1950 Census reports.--Data for 1950 on number of teachers by college level and below were presented in 1950 Census of Population, Volume II, Characteristics of the Population. More detailed cross-classifications of data for teachers for 1950 were presented in 1950 Census of Population, Volume IV, Special Reports, Part 1, chapter B, Occupational Characteristics. (For a discussion of 1950-1960 comparisons, see section on "Comparability," below.)

Current Population Survey.--Data on occupations including "teachers, except college" are also collected by the Bureau of the Census through the Current Population Survey (CPS) and published monthly by the Bureau of Labor Statistics, U.S. Department of Labor, in Employment and Earnings. In April 1960, the CPS sample included approximately 35,000 households in 333 areas throughout the country. The statistics provided by the Current Population Survey are, in general, designed to be comparable with the decennial census statistics. There are, however, certain elements of difference, as explained in the section on "Comparability," below.

Data for October 1961 on teachers below the college level by age and sex, and on those in public

schools by marital status, age, and sex, have been published in Current Population Reports, Series P-20, No. 117.

Other reports.--The Office of Education, U.S. Department of Health, Education, and Welfare, collects information on classroom school teachers in the United States and publishes it annually in the report entitled Digest of Educational Statistics. The National Education Association shows the number of elementary and secondary school teachers by States in its annual publication entitled Estimates of School Statistics. Both of these agencies publish a number of other reports which contain information on teachers and other aspects of the educational system in the United States.

AVAILABILITY OF UNPUBLISHED DATA

Unpublished data on family size, employment status, number of hours worked during the reference week, number of weeks worked in 1959, value of owner-occupied nonfarm housing units and gross rent of renter-occupied housing units for teachers can be obtained on a reimbursable basis. Requests for unpublished data, giving a specific description of the figures desired, may be made by writing to the Chief, Population Division, Bureau of the Census, Washington, D.C., 20233. Inquiries concerning unpublished data should be transmitted to the Bureau as soon as possible because tape files are not maintained indefinitely.

DEFINITIONS AND EXPLANATIONS

Some of the definitions used in 1960 differ from those used in 1950. These changes were made after consultation with users of census data in order to improve the statistics, even though it was recognized that comparability would be affected. The definitions and explanations should be interpreted in the context of the 1960 Censuses, in which data were collected by a combination of self-enumeration, direct interview, and observation by the enumerator.

The definitions below are consistent with the instructions given to the enumerator. As in all surveys, there were some failures to execute the instructions exactly. Through the forms distributed to households, the respondents were given explanations of some of the questions more uniformly than would have been given in direct interviews. Nevertheless, it was not feasible to give the full instructions to the respondents, and some erroneous replies have undoubtedly gone undetected.

More complete discussions of the definitions of population items are given in 1960 Census of Population, Volume I, Characteristics of the Population, Part 1, United States Summary, and in each of the State parts.

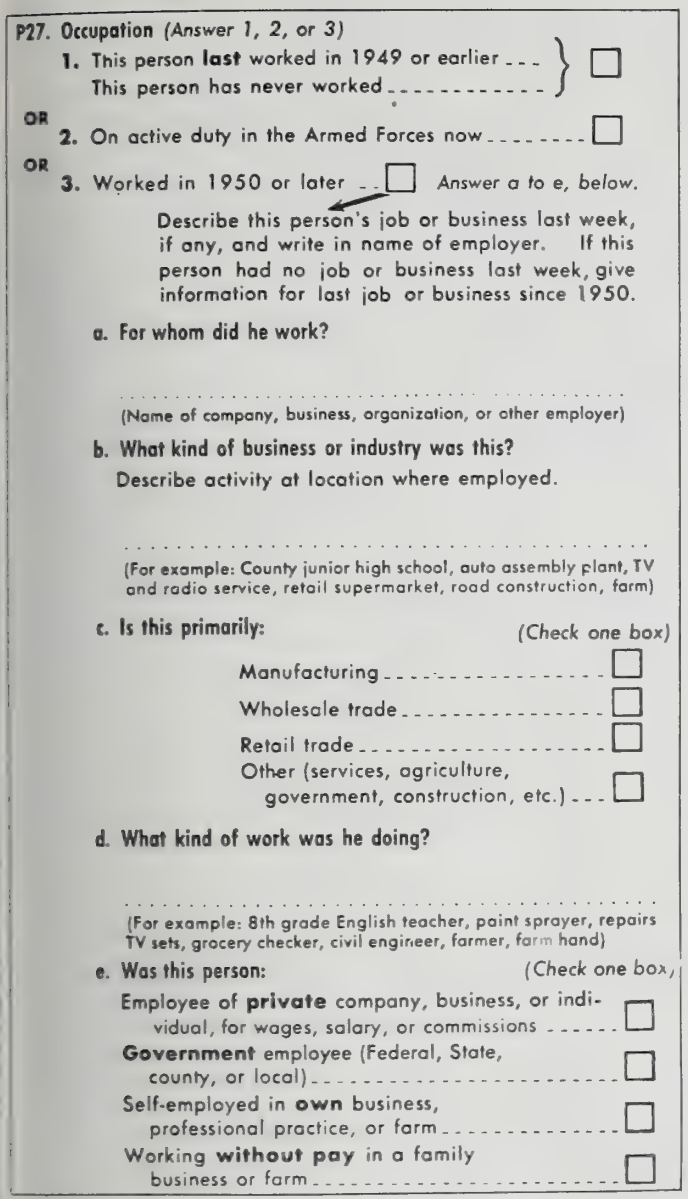
EMPLOYMENT STATUS

The data on employment status relate to the calendar week prior to the date on which the respondents filled their Household Questionnaires or were interviewed by enumerators. This week is not the same for all respondents because not all persons were enumerated during the same week.

Employed persons comprise all civilians 14 years old and over who were either (a) "at work"--those who did any work for pay or profit, or worked without pay for 15 hours or more on a family farm or in a family business; or (b) were "with a job but not at work"--those who did not work and were not looking for work but had a job or business from which they were temporarily absent because of bad weather, industrial dispute, vacation, illness, or other personal reasons.

Persons are classified as unemployed if they were 14 years old and over and not "at work" but looking for work. A person is considered as looking for work not only if he actually tried to find work but also if he had made such efforts recently (i.e., within the past 60 days) and was awaiting the results of these efforts. Persons waiting to be called back to a job from which they had been laid off or furloughed are also counted as unemployed. Unemployed persons who have worked at any time in the past are classified as the "experienced unemployed."

The "civilian labor force" includes all persons classified as employed or unemployed, as described above. The "labor force" also includes members of the Armed Forces (persons on active duty with the United States Army, Air Force, Navy, Marine Corps, or Coast Guard). The "experienced civilian labor force" comprises the employed and the experienced unemployed.



Persons "not in the labor force" comprise all those 14 years old and over who are not classified as members of the labor force, including persons doing only incidental unpaid family work (less than 15 hours during the week).

OCCUPATION AND CLASS OF WORKER

Occupation

The data on occupation, as well as on industry and class of worker, were derived from answers to the questions on the Household Questionnaire, shown on the following page.

In the 1960 Census of Population, information on teachers, as well as all other occupational information, was collected for persons in the experienced civilian labor force and also for persons not in the current labor force who had worked some time during the period 1950 to April 1960. For an employed person, the information referred to the job held during the reference period. If he was employed at two or more jobs during this period, the job at which he worked the greatest number of hours was reported. Thus, part-time teachers who worked primarily in another occupation are not included in the census classification of teachers. For experienced unemployed persons, i.e., unemployed persons who have had job experience, and for those not in the labor force, the occupational information referred to the last job that had been held.

P27. Occupation (Answer 1, 2, or 3)

1. This person **last** worked in 1949 or earlier ... / This person has never worked ... ☐

OR

2. On active duty in the Armed Forces now ... ☐

OR

3. Worked in 1950 or later ... ☐ Answer a to e, below.

Describe this person's job or business last week, if any, and write in name of employer. If this person had no job or business last week, give information for last job or business since 1950.

a. For whom did he work?

(Name of company, business, organization, or other employer)

b. What kind of business or industry was this?
Describe activity at location where employed.

(For example: County junior high school, auto assembly plant, TV and radio service, retail supermarket, road construction, farm)

c. Is this primarily: (Check one box)

- Manufacturing ... ☐
- Wholesale trade ... ☐
- Retail trade ... ☐
- Other (services, agriculture, government, construction, etc.) ... ☐

d. What kind of work was he doing?

(For example: 8th grade English teacher, paint sprayer, repairs TV sets, grocery checker, civil engineer, farmer, farm hand)

e. Was this person: (Check one box)

- Employee of **private** company, business, or individual, for wages, salary, or commissions ... ☐
- **Government** employee (Federal, State, county, or local) ... ☐
- Self-employed in **own** business, professional practice, or farm ... ☐
- Working **without pay** in a family business or farm ... ☐

Teachers.--Persons in the teaching profession, as used in this report, comprise all those classified in one of the following occupations:

College presidents, professors, and instructors (not elsewhere classified)
  College presidents and deans
  Professors and instructors:
    Agricultural sciences
    Biological sciences
    Chemistry
    Economics
    Engineering
    Geology and geophysics
    Mathematics
    Medical sciences
    Physics
    Psychology
    Statistics
    Natural sciences (n.e.c.)
    Social sciences (n.e.c.)
    Nonscientific subjects
    Subject not specified

Teachers, below college level
  Teachers, elementary schools
    Public
    Private
  Teachers, secondary schools
    Public
    Private
  Teachers (n.e.c.)

Elementary school, as defined here, includes grades 1 to 8, and secondary school includes grades 9 to 12. Junior high school teachers who did not report the specific grade they teach were classified as secondary school teachers. Teachers for whom no information was reported on the level of school they teach were classified as "Teachers, n.e.c."

Persons teaching in areas other than those mentioned above are classified according to the specific area of their teaching (e.g., teachers of music are classified as "musicians and music teachers") and are not included in the data for this report. The number of these teachers may be roughly approximated in report PC(2)-7C, Occupation by Industry, for persons in these occupations classified in the "educational services" industry.

Class of Worker

The class-of-worker classification refers to the same job as the occupation classification. The assignment of a person to a particular class-of-worker category is basically independent, however, of the occupation in which he worked. The classification by class of worker consists of four categories which are defined as follows:

1. Private wage and salary workers.--Persons who worked for a private employer for wages, salary, commission, tips, pay-in-kind, or at piece rates.

2. Government workers.--Persons who worked for any governmental unit (Federal, State, local, or international), regardless of the activity which the particular agency carried on.

3. Self-employed workers.--Persons who worked for profit or fees in their own business, profession, or trade, or who operated a farm either as an owner or tenant.

4. Unpaid family workers.--Persons who worked without pay on a farm or in a business operated by a person to whom they are related by blood or marriage.

Public and private schools.--The classification of teachers below college level into private or public is based upon their class-of-worker entry. If the class-of-worker entry is "government," then the teacher is classified as teaching public school, and for any other class-of-worker entry, she is classified as teaching "private school."

Persons who were enrolled in school were classified in the census as attending public or private school. This classification of students by type of school is based on answers to a direct question on public and private school enrollment and thus is not directly comparable with the classification of teachers by type of school.

Occupational Classification System

The occupational classification system used in the 1960 Census of Population was developed in consultation with many individuals, private organizations, and government agencies, and in particular the Interagency Occupational Classification Committee of the U.S. Bureau of the Budget. The system is organized into 12 major groups and consists of 297 specific occupation categories of which the occupations selected for this report are a part. The composition of the 297 specific categories is shown in the publication, U.S. Bureau of the Census, 1960 Census of Population, Classified Index of Occupations and Industries, U.S. Government Printing Office, Washington, D.C., 1960.

In the classification of occupations into four broad groups shown in table 6, the categories are as follows:

White collar workers include professional workers, nonfarm proprietors and managers, and sales and clerical workers.

Manual workers include craftsmen, operatives, and nonfarm laborer groups.

Service workers include private household and other service groups.

Farm workers include farm proprietors, managers, foremen, and laborers.

The abbreviation "n.e.c." used in occupation tables of the Census means "not elsewhere classified."

Comparability

Earlier censuses.--Prior to the 1960 Census, separate data on the component categories of "college presidents, professors, and instructors (n.e.c.)" were not collected. For the occupation group "teachers below college level," data for the 1950 and 1940 Censuses were presented as "teachers (n.e.c.)" as contrasted to the classification of this group in 1960 by level and type of school.

Basically, the occupation groups "college presidents, professors, and instructors (n.e.c.)" and "teachers below college level" are the same in the 1960 Census as in the 1940 and 1950 Censuses. However, changes in schedule design and interviewing techniques from one census to the next may have affected comparability. The following publications contain much helpful information on the various factors of comparability and are particularly useful for understanding differences in the occupation information from earlier censuses: U.S. Bureau of the Census, Sixteenth Census Reports, Population, Comparative Occupation Statistics for the United States, 1870 to 1940, 1943; and Bureau of the Census Working Paper No. 5, Occupational Trends in the United States: 1900 to 1950, 1958.

Current Population Survey.--Data from the CPS are presented monthly for the group "teachers, except college." Table A presents a comparison of data for this occupation as shown by the census 25-percent sample and the April 1960 CPS.

The differences that exist between the national data from the Census of Population and the CPS are due to a number of factors. Among these are the more extensive training, control of, and experience of the CPS enumerators; differences in the time period to which the labor force data apply (the CPS covered the week containing the 12th of the month whereas the census covered the week prior to the date the respondent filled his questionnaire or was interviewed); differences in question wording and format of the schedules; differences in the weighting procedure and in the population controls; differences in noninterview rates and the treatment of noninterview cases; and the sampling variability in the CPS and in the 5-percent census sample used in this report.

Table A.--TEACHERS, EXCEPT COLLEGE, AS PERCENT OF TOTAL EMPLOYED PERSONS, BY SEX, FROM THE 1960 CENSUS AND APRIL 1960 CURRENT POPULATION SURVEY

Sex	Census (25-percent sample)[1]	CPS
Total	2.7	2.6
Male	1.1	1.0
Female	6.0	5.9

[1] Excludes persons who did not report their occupation.

Other data.--Comparability between statistics presented in this report and statistics from other sources is frequently affected by differences in concepts and definitions. Because the 1960 Census employment data were obtained from households, they differ from statistics based on reports from professional associations, certain government programs, and professional unions. In data shown here, persons employed at more than one job are counted only once as employed and are classified according to the job at which they worked the greatest number of hours during the reference week. Therefore, the census data provide a measure of the magnitude of an active working occupational group at the time of a specific reference period. In comparison, statistics based on organizational membership may differ because of the inclusion of retired persons or persons devoting all or most of their time to other activities, the inclusion of the same person in two or more different listings, and the fact that relatively few organizations attain complete coverage of membership in an occupation field.

Quality and Limitations of Data on Teachers

The statistics on the number of workers in the teaching profession, shown here, are probably subject to some understatement because of the omission of some marginal teachers from the count of employed persons. For example, persons who taught school for a few days on a substitute basis may have failed to report they were employed. Such omissions arise from the difficulty of applying certain of the employment status concepts, and, perhaps more important, from the fact that complete information is not always obtained for certain groups.

The data on college professors and instructors by subject fields may be somewhat understated because of

the omission in some instances of the required information. In the absence of such information, the classification "professors and instructors, subject not specified" was used.

Another problem was encountered in the classification of teachers below the college level into elementary or secondary schools because of the variations in school systems among different areas and also because of insufficient information reported. For example, an eighth grade teacher in a junior high school could be classified in any one of three categories depending on the information reported. If she reported herself as an "eighth grade teacher," she was classified in the category "teachers, elementary schools"; if she reported as a "junior high school teacher," she was classified in the group "teachers, secondary schools"; and if she reported only as a "teacher," she was classified in the group "teachers (n.e.c.)."

The classification of students by level of school in the census is based on the answer to the question on the grade of school the student was attending. Students in grades 1 to 8 were regarded as enrolled in elementary school and those in grades 9 to 12 as in high school. On the other hand, the classification of teachers by elementary or secondary schools is based on the responses to the occupation question. This difference should be borne in mind when comparing the number of teachers at a given level with the number of students enrolled at that level.

MEDIAN

The median is presented in connection with the data on age, years of school completed and income. It is the value which divides the distribution into two equal parts, one-half the cases falling below this value and one-half the cases exceeding this value.

A plus (+) or minus (-) sign after the median indicates that the median is above or below that number. For example, a median of $10,000+ for income indicates that the median fell in the interval "$10,000 and over."

URBAN-RURAL RESIDENCE

In general, the urban population comprises all persons living in urbanized areas and in places of 2,500 inhabitants or more outside urbanized areas. More specifically, according to the definition adopted for use in the 1960 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); (b) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas; (c) towns in New England and townships in New Jersey and Pennsylvania which contain no incorporated municipalities as subdivisions and have either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile; (d) counties in States other than the New England States, New Jersey, and Pennsylvania that have no incorporated municipalities within their boundaries and have a density of 1,500 persons or more per square mile; and (e) unincorporated places of 2,500 inhabitants or more. The population not classified as urban constitutes the rural population.

FARM-NONFARM RESIDENCE

The rural population is subdivided into the rural-farm population, which comprises all rural residents living on farms, and the rural-nonfarm population, which comprises the remaining rural population. In the 1960 Census, the farm population consists of persons living in rural territory on places of 10 or more acres from which sales of farm products amounted to $50 or more in 1959 or on places of less than 10 acres from which sales of farm products amounted to $250 or more in 1959. All persons living in group quarters are classified as nonfarm except the relatively few living in workers' quarters (including quarters for migratory agricultural workers) that are located on a farm or ranch.

URBANIZED AREA

An urbanized area contains at least one city of 50,000 inhabitants or more in 1960 and the surrounding closely settled incorporated places and unincorporated areas that meet certain criteria relating to population density or land use. An urbanized area may be thought of as divided into the central city, or cities, and the remainder of the area, or the urban fringe. All persons residing in an urbanized area are included in the urban population.

AGE

The age classification is based on the age of the person in completed years as of April 1, 1960, as determined from the reply to a question on month and year of birth.

RACE AND COLOR

The three major race categories distinguished in this report are white, Negro, and other races. Among persons of "other races" are American Indians, Japanese, Chinese, Filipinos, Koreans, Hawaiians, Asian Indians, Eskimos, Aleuts, and Malayans. Negroes and persons of "other races" taken together constitute "nonwhite" persons. Persons of Mexican birth or descent who are not definitely of Indian or other nonwhite race are classified as white. In addition to persons of Negro and of mixed Negro and white descent, the category "Negro" includes persons of mixed Indian and Negro descent unless the Indian ancestry very definitely predominates or unless the person is regarded as an Indian in the community.

YEARS OF SCHOOL COMPLETED

The data on years of school completed were derived from the answers to the two questions: (a) "What is the highest grade (or year) of regular school he has ever attended?" and (b) "Did he finish this grade (or year)?" Enumerators were instructed to obtain the

approximate equivalent grade in the American school system for persons whose highest grade of attendance was in a foreign school system, whose highest level of attendance was in an ungraded school, whose highest level of schooling was measured by "readers," or whose training by a tutor was regarded as qualifying under the "regular" school definition. Persons were to answer "No" to the second question if they were attending school, had completed only part of a grade before they dropped out, or failed to pass the last grade attended.

The number in each category of highest grade of school completed represents the combination of (a) persons who reported that they had attended the indicated grade and finished it, and (b) those who had attended the next higher grade but had not finished it.

The questions on educational attainment applied only to progress in "regular" schools. Regular schooling is that which may advance a person toward an elementary school certificate or high school diploma, or a college, university, or professional degree. Schooling that was not obtained in a regular school and schooling from a tutor or through correspondence courses were counted only if the credits obtained were regarded as transferable to a school in the regular school system. Schooling which is generally regarded as not regular includes that which is given in nursery schools, in specialized vocational, trade, or business schools; in on-the-job training; and through correspondence courses.

Elementary school, as defined here, includes grades 1 to 8, and high school includes grades 9 to 12. College includes junior or community colleges, regular 4-year colleges, and graduate or professional schools.

MARITAL STATUS

This classification refers to the marital status of the person at the time of enumeration. Persons classified as "married" comprise, therefore, both those who have been married only once and those who remarried after having been widowed or divorced. Persons reported as separated (either legally separated or otherwise absent from the spouse because of marital discord) are classified as a subcategory of married persons. The enumerators were instructed to report persons in common-law marriages as married and persons whose only marriage had been annulled as single. Persons "ever married" are those in the categories married (including separated), widowed, and divorced.

A married person with "spouse present" is a man or woman whose spouse was enumerated as a member of the same household even though he or she may have been temporarily absent on business or vacation, visiting, in a hospital, etc., at the time of enumeration.

HOUSEHOLD, FAMILY, AND OWN CHILD

A household consists of all the persons who occupy a housing unit. A house, an apartment or other group of rooms, or a single room, is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters; that is, when the occupants do not live and eat with any other persons in the structure and there is either (1) direct access from the outside or through a common hall or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

A family consists of two or more persons in the same household who are related to each other by blood, marriage, or adoption; all persons living in one household who are related to each other are regarded as one family.

An own child of a woman ever married is defined here as a single (never married) son, daughter, stepchild, or adopted child of the woman. Only those children who are present in the home are included in the count of women by number of own children.

WEEKS WORKED IN 1959

The data on weeks worked in 1959 pertain to the number of different weeks during 1959 in which a person did any work for pay or profit (including paid vacation and sick leave) or worked without pay on a family farm or in a family business. Weeks of active service in the Armed Forces are also included.

YEAR LAST WORKED

The "year last worked" pertains to the most recent year in which a person did any work for pay or profit, or worked without pay on a family farm or in a family business. Active service in the Armed Forces is also included. Data derived from this item were tabulated for persons classified as not in the labor force and for persons classified as unemployed. Persons not in the labor force with work experience within the last 10 years are referred to as members of the "labor reserve."

INCOME IN 1959

Information on income for the calendar year 1959 was requested from all persons 14 years old and over in the sample. "Total income" is the sum of amounts reported separately for wage or salary income, self-employment income, and other income. Wage or salary income is defined as the total money earnings received for work performed as an employee. It represents the amount received before deductions for personal income taxes, Social Security, bond purchases, union dues, etc. Self-employment income is defined as net money income (gross receipts minus operating expenses) from a business, farm, or professional enterprise in which the person was engaged on his own account. Earnings are obtained by summing wage or salary income and self-employment income. Other income includes money income received from such sources as net rents, interest, dividends, Social Security benefits, pensions, veterans' payments, unemployment insurance, and public assistance or other governmental payments, and periodic receipts from insurance policies or annuities. Not included as income are money received from the sale of property (unless the recipient was engaged in the

business of selling such property), the value of income "in kind," withdrawals of bank deposits, money borrowed, tax refunds, and gifts and lump-sum inheritances or insurance payments.

In the statistics on family income, the combined incomes of all members of each family are treated as a single amount. Although the time period covered by the income statistics is the calendar year 1959, the composition of families refers to the time of enumeration. For most of the families, however, the income reported was received by persons who were members of the family throughout 1959.

COLLECTION AND PROCESSING OF DATA

COLLECTION OF DATA

Several enumeration forms were used to collect the information for the 1960 Census of Population. A few days before the census date, the Post Office Department delivered an Advance Census Report (ACR) to households on postal delivery routes. This form contained questions which were to be answered for every person and every housing unit. Household members were requested to fill the ACR and have it ready for the enumerator. The census enumerator recorded this information on a form specially designed for electronic data processing by FOSDIC (Film Optical Sensing Device for Input to Computer). The information was either transcribed from the ACR to the complete-count FOSDIC schedule or entered on this schedule during direct interview.

In the densely populated areas, the enumerator left a Household Questionnaire to be completed by each household (or person) in the sample and mailed to the local census office. The population and housing information was transcribed from the Household Questionnaire to a sample FOSDIC schedule. When the Household Questionnaire was not returned or was returned without having been completed, the enumerator collected the missing information by personal visit or by telephone and entered it directly on the sample FOSDIC schedule. In the remaining areas, when the enumerator picked up the ACR, he obtained all the information by direct interview and recorded it directly on the sample FOSDIC schedule.

Soon after the enumerator started work, his schedules were examined in a formal field review. This operation was designed to assure at an early stage of the work that the enumerator was performing his duties properly and had corrected any errors he had made.

More detailed descriptions of the 1960 Census procedures in the collection and processing of the data are given in reports entitled United States Censuses of Population and Housing, 1960: Principal Data Collection Forms and Procedures, 1961; and Processing the Data, 1962, U.S. Government Printing Office, Washington, D.C., 20402.

MANUAL EDITING AND CODING

After the FOSDIC forms had been checked for completeness in the field, they were sent to a central processing office for manual editing and coding and for microfilming. Except where some special problems arose, there was no manual coding of the FOSDIC forms for complete-count data. On the sample forms, the manual operation was limited to those items where coding required the reading of written entries and therefore could not be done effectively by machine. The coding clerks converted the written entries to codes by marking the appropriate circles on the FOSDIC schedules and at the same time were able to correct obviously wrong entries and sometimes supply missing information.

ELECTRONIC PROCESSING

After the enumerators and coders recorded the information by marking the appropriate circles, the schedules were microfilmed. The information on the microfilm was then read by FOSDIC, which converted the markings to signals on magnetic tape. The tape, in turn, was processed in an electronic computer, which was used extensively to edit and tabulate the data and to produce the publication tables.

EDITING

For a majority of items, nonresponses and inconsistencies were eliminated by using the computer to assign entries and correct inconsistencies. In general, few assignments or corrections were required, although the amount varied by subject and by enumerator.

The assignment of an acceptable entry by machine was based on related information reported for the person or on information reported for a similar person in the immediate neighborhood. For example, in the assignment of age in the complete-count tabulations, the computer stored reported ages of persons by sex, color or race, household relationship, and marital status; each stored age was retained in the computer only until a succeeding person having the same characteristics and having age reported was processed through the computer; this stored age was assigned to the next person whose age was unknown and who otherwise had the same characteristics. This procedure insured that the distribution of ages assigned by the computer for persons of a given set of characteristics would correspond closely to the reported age distribution of such persons as obtained in the current census.

The extent of the allocations for nonresponse or for inconsistency is shown for the United States and for States, places of 10,000 inhabitants or more, and other areas in appendix tables in chapters B, C, and D of 1960 Census of Population, Volume I, Characteristics of the Population.

Specific tolerances were established for the number of computer allocations acceptable for a given area. If the number was beyond tolerance, the data were rejected and the original schedules were reexamined to determine the source of the error. Correction and reprocessing were undertaken as necessary and feasible.

ACCURACY OF THE DATA

Human and mechanical errors occur in any mass statistical operation such as a decennial census. Such errors include failure to obtain required information from respondents, obtaining inconsistent information, recording information in the wrong place or incorrectly, or otherwise producing inconsistencies between entries on interrelated items on the field documents. Sampling biases occur because some of the enumerators fail to follow the sampling instructions. Clerical coding and editing errors occur, as well as errors in the electronic processing operation.

Careful efforts are made in every census to keep the errors in each step at an acceptably low level. Review of the enumerator's work, verification of manual coding and editing, checking of tabulated figures, and ratio estimation of sample data to control totals from the complete count reduce the effects of the errors in the census data.

Very minor differences between tables in this report or between corresponding data in this report and other reports containing 1960 Census data from the 5-percent sample result from imperfections in the electronic equipment. No attempt has been made to reconcile these minor discrepancies.

Some innovations in the 1960 Censuses reduced errors in processing and others produced a more consistent quality of editing. The elimination of the card-punching operation removed one important source of error. The extensive use of electronic equipment insured a more uniform and more flexible edit than could have been accomplished manually or by less intricate mechanical equipment. It is believed that the use of electronic equipment in the 1960 Censuses has improved the quality of the editing compared with that of earlier censuses but, at the same time, it has introduced an element of difference in the statistics.

A group of reports designated "Evaluation and Research Program Series" will deal with the methods, results, and interpretation of a group of evaluation and research studies of the 1960 Censuses of Population and Housing. A report entitled The Post-Enumeration Survey: 1950, Technical Paper No. 4, presents evaluative material on the 1950 Census.

SAMPLE DESIGN AND SAMPLING VARIABILITY

SAMPLE DESIGN

For persons in housing units at the time of the 1960 Census, the sampling unit was the housing unit and all its occupants; for persons in group quarters, it was the person. On the first visit to an address, the enumerator assigned a sample key letter (A, B, C, or D) to each housing unit sequentially in the order in which he first visited the units, whether or not he completed an interview. Each enumerator was given a random key letter to start his assignment, and the order of canvassing was indicated in advance, although these instructions allowed some latitude in the order of visiting addresses. Each housing unit to which the key letter "A" was assigned was designated as a sample unit, and all persons enumerated in the unit were included in the sample. In every group quarters, the sample consisted of every fourth person in the order listed. The 1960 statistics in this report are based on a subsample of one-fifth of the original 25-percent sample schedules. The subsample was selected on the computer, using a stratified systematic sample design. The strata were made up as follows: For persons in regular housing units there were 36 strata, i.e., 9 household size groups by 2 tenure groups by 2 color groups; for persons in group quarters, there were 2 strata, i.e., the 2 color groups.

Although the sampling procedure did not automatically insure an exact 5-percent sample of persons, the sample design was unbiased if carried through according to instructions. Generally, for large areas, the deviation from the estimated sample size was found to be quite small. Biases may have arisen, however, when the enumerator failed to follow his listing and sampling instructions exactly.

Table B.--COMPARISON OF 25-PERCENT AND 5-PERCENT SAMPLE DATA ON TEACHERS, BY SEX, FOR THE UNITED STATES: 1960

Occupation and sex	25-percent sample	5-percent sample	Percent distribution		Ratio of 25-percent sample number to 5-percent sample number
			25-percent sample	5-percent sample	
Total, experienced civilian labor force	67,990,073	68,006,553	100.00	100.00	1.000
College presidents, prof'rs, and instr's (n.e.c.)	178,676	177,342	0.26	0.26	1.008
Teachers: Elementary schools	1,010,682	1,008,095	1.49	1.48	1.003
Secondary schools	520,567	522,286	0.77	0.77	0.997
Teachers (n.e.c.)	152,417	152,031	0.22	0.22	1.003
Male, experienced civilian labor force	45,686,325	45,713,381	100.00	100.00	0.999
College presidents, prof'rs, and instr's (n.e.c.)	139,508	138,975	0.31	0.30	1.004
Teachers: Elementary schools	143,936	142,284	0.32	0.31	1.012
Secondary schools	275,592	275,917	0.60	0.60	0.999
Teachers (n.e.c.)	58,457	58,697	0.13	0.13	0.996
Female, experienced civilian labor force	22,303,748	22,293,172	100.00	100.00	1.000
College presidents, prof'rs, and instr's (n.e.c.)	39,168	38,367	0.18	0.17	1.021
Teachers: Elementary schools	866,746	865,811	3.89	3.88	1.001
Secondary schools	244,975	246,369	1.10	1.11	0.994
Teachers (n.e.c.)	93,960	93,334	0.42	0.42	1.007

Table B compares the number of teachers, as presented in this report, with the corresponding figures based on the 25-percent sample presented in Volume I of the 1960 Census of Population. Differences in this table reflect primarily sampling error.

RATIO ESTIMATION

The statistics based on the 5-percent sample of the 1960 Census returns are estimates that have been developed through the use of a ratio estimation procedure. This procedure was carried out for each of the following 44 groups of persons in each of the sample weighting areas:[1]

Group	Sex, color, and age	Relationship and tenure
	Male white:	
1	Under 5	
2	5 to 13	
3	14 to 24	Head of owner household
4	14 to 24	Head of renter household
5	14 to 24	Not head of household
6-8	25 to 44	Same groups as age group 14 to 24
9-11	45 and over	Same groups as age group 14 to 24
	Male nonwhite:	
12-22	Same groups as male white	
	Female white:	
23-33	Same groups as male white	
	Female nonwhite:	
34-44	Same groups as male white	

The sample weighting areas were defined as those areas within a State consisting of central cities of urbanized areas, the remaining portion of urbanized areas not in central cities, urban places not in urbanized areas, or rural areas.

For each of the 44 groups, the ratio of the complete count to the sample count of the population in the group was determined. Each specific sample person in the group was assigned an integral weight so that the sum of the weights would equal the complete count for the group. For example, if the ratio for a group was 20.1, one-tenth of the persons (selected at random) within the group were assigned a weight of 21, and the remaining nine-tenths a weight of 20. The use of such a combination of integral weights rather than a single fractional weight was adopted to avoid the complications involved in rounding in the final tables. In order to increase the reliability, where there were fewer than 275 persons in the complete count in a group, or where the resulting weight was over 80, groups were combined in a specific order to satisfy both of these two conditions.

These ratio estimates reduce the component of sampling error arising from the variation in the size of household and achieve some of the gains of stratification in the selection of the sample, with the strata being the groups for which separate ratio estimates are computed. The net effect is a reduction in the sampling error and bias of most statistics below what would be obtained by weighting the results of the 5-percent sample by a uniform factor of twenty. The reduction in sampling error will be trivial for some items and substantial for others. A by product of this estimation procedure, in general, is that estimates for this sample are generally consistent with the complete count with respect to the total population and for the subdivisions used as groups in the estimation procedure. A more complete discussion of the technical aspects of these ratio estimates will be presented in another report.

SAMPLING VARIABILITY

The figures from the 5-percent sample tabulations are subject to sampling variability, which can be estimated roughly from the standard errors shown in tables C and D below. These tables[2] do not reflect the effect of response variance, processing variance, or bias arising in the collection, processing, and estimation steps. Estimates of the magnitude of some of these factors in the total error are being evaluated and will be published at a later date. The chances are about 2 out of 3 that the difference due to sampling variability between an estimate and the figure that would have been obtained from a complete count of the population is less than the standard error. The chances are about 19 out of 20 that the difference is less than twice the standard error and about 99 out of 100 that it is less than $2\frac{1}{2}$ times the standard error. The amount by which the estimated standard error must be multiplied to obtain other odds deemed more appropriate can be found in most statistical textbooks.

Table C.--ROUGH APPROXIMATION TO STANDARD ERROR OF ESTIMATED NUMBER

(Range of 2 chances out of 3)

Estimated number	Standard error	Estimated number	Standard error
50	30	5,000	280
100	40	10,000	390
250	60	15,000	480
500	90	25,000	620
1,000	120	50,000	880
2,500	200		

[1] Estimates of characteristics from the sample for a given area are produced using the formula:

$$x' = \sum_{i=1}^{44} \frac{x_i}{y_i} Y_i$$

where x' is the estimate of the characteristic for the area obtained through the use of the ratio estimation procedure,
x_i is the count of sample persons with the characteristic for the area in one (i) of the 44 groups,
y_i is the count of all sample persons for the area in the same one of the 44 groups, and
Y_i is the count of persons in the complete count for the area in the same one of the 44 groups.

[2] The estimates of sampling variability are based on calculations from a preliminary sample of the 1960 Census results. Further estimates are being calculated and will be available at a later date.

Table D.--ROUGH APPROXIMATION TO STANDARD ERROR OF ESTIMATED PERCENTAGE

(Range of 2 chances out of 3)

Estimated percentage	Base of percentage					
	500	1,000	2,500	10,000	25,000	100,000
2 or 98.....	3.3	2.3	1.3	0.8	0.3	0.3
5 or 95.....	5.0	4.0	2.3	1.0	0.5	0.3
10 or 90.....	7.0	5.0	3.0	1.5	0.8	0.5
25 or 75.....	10.0	6.8	3.8	1.8	1.0	0.5
50.....	11.0	7.8	4.0	2.0	1.3	0.8

Table C shows rough standard errors of estimated numbers up to 50,000. The relative sampling errors of larger estimated numbers are somewhat smaller than for 50,000. For estimated numbers above 50,000, however, the nonsampling errors, e.g., response errors and processing errors, may have an increasingly important effect on the total error. Table D shows rough standard errors of data in the form of percentages. Linear interpolation in tables C and D will provide approximate results that are satisfactory for most purposes.

For a discussion of the sampling variability of medians and means and of the method for obtaining standard errors of differences between two estimates, see 1960 Census of Population, Volume I, Characteristics of the Population, Part 1, United States Summary.

Illustration: Table 2 shows a total of 4,221 males 35 to 44 years of age teaching public secondary schools in other urban places in the North Central Region. Table C shows that the standard error for an estimate of 4,221 is about 254, which means that the chances are approximately 2 out of 3 that the results of a complete census would not differ by more than 254 from this estimated 4,221. It also follows that there is only about 1 chance in 100 that a complete census result would differ by as much as 635--that is, by about $2\frac{1}{2}$ times the number estimated from table C.

Table 1. RESIDENCE OF TEACHERS IN THE EXPERIENCED CIVILIAN LABOR FORCE, BY OCCUPATION, RACE, AND SEX, FOR THE UNITED STATES AND THE SOUTH: 1960
